Allied Machine & Engineering is a worldwide leader in holmaking and finishing solutions. We are committed to providing practical and dependable solutions to our customers through innovative designs and superior customer and technical support.

We continue to expand our product offering in order to provide new and different solutions. With Field Sales Engineers located around the world, we position ourselves to provide technical support on site, right at your spindle.

ALLIED MACHINE
& ENGINEERING

www.alliedmachine.com

The Foundation

Since 1941, Allied Machine & Engineering has provided dependable and practical holemaking solutions to the world. What was once a small job shop in Ohio is now a worldwide leader in cutting tool technology. With three manufacturing facilities in Ohio, one in Georgia, another in Germany, and headquarters in both the United States and Europe, Allied Machine is positioned to bring innovative solutions and technical expertise directly to the customers' hands.

The Beginning

Harold E. Stokey founded Allied Machine & Engineering to aid the war effort, manufacturing taper bearing lock nuts for the production of M1 tanks. Years later, after a sales meeting gone wrong, Stokey possessed a warehouse stocked with spade drill inserts. He set forth into the industry that would become Allied Machine's thriving identity: holemaking.

The T-A®

When Harold's son, William H. Stokey, became the president and CEO, he developed the Throw Away, or T-A, spade drill insert system. The T-A revolutionised the holemaking industry, launching Allied Machine ahead of the competition. Since then, numerous innovations and advancements have been created from the T-A's inspiration.

The Innovation

Since the development of the T-A, Allied Machine has expanded its product offering to support a vast range of customer applications, including large diameter and deep hole drilling, boring, reaming, burnishing, porting, and threading.

The People

Allied Machine understands that high-quality products are only one facet of success. Our customer support is crucial to what we do, and that's why we make sure the best engineers and customer service associates are in place to assist our customers around the world.

The Future

With over 75 years of experience, Allied Machine has encountered the challenges of growth and success. By investing in cutting edge technology and the brightest and sharpest minds, our knowledge and capabilities continue to expand and grow every day.

Product Offering Overview

DRILLING

The highest performance cutting tools to cover the largest range of drilling applications.

- Replaceable Insert Drills:
 - T-A Pro® | T-A® | GEN2 T-A®
 - GEN3SYS® XT Pro | GEN3SYS® XT
- Indexable Insert Drills:
 - 4TEX® Drill
 - Revolution Drill®
 - Opening Drill®
 - APX™ Drill
- Solid Carbide Drills:
 - Superion®
- Hydraulic Port Contour Cutters:
 - AccuPort 432®
- BTA (STS) Machining Solutions:
 - BT-A Drill
- Structural Steel Solutions*:
 - T-A® | GEN2 T-A®
 - GEN3SYS® XT | GEN3SYS® XT Pro
 - 4TEX® Drill

BORING

All your hole finishing applications can be conquered with the Wohlhaupter® product lines.

- Products:
 - Versatile Fine Boring
 - Fine Boring
 - Rough & Finish Boring
 - Rough Machining
 - Intermediate Modules
 - MVS Master Shanks
 - Large Diameter Boring Tools
 - Universal Facing & Boring Tools

WOHLHAUPTER®

REAMING

ALVAN® reamers by S.C.A.M.I. provide excellent hole finishes and hold tight tolerances to ensure processes are performed to accurate specifications.

- Products:
 - Replaceable head style
 - Monobloc style
 - Cutting ring style

S.C.A.M.I.®

S.C.A.M.I.®

BURNISHING

S.C.A.M.I. roller burnishing tools produce excellent surface finishes and increase surface hardness.

- Products:
 - Blind hole burnishers
 - Through hole burnishers

THREADING

Achieve precise thread forms with a large variety of thread mills through the ThreadMills USA™ and AccuThread® product lines.

- Products:
 - ThreadMills USA™ solid carbide
 - AccuThread® 856 solid carbide
 - AccuThread® T3
 - AccuThread® 856: Bolt-in Style
 - AccuThread® 856: Pin Style

SPECIALS

If your application can't be satisfied with standard tooling, Allied can special engineer any product for your solution.

- Products:
 - Superion® solid carbide and PCD tools
 - Allied Machine and Wohlhaupter® engineered specials

Take on Tough Drilling

Allied Machine's structural steel drilling system is designed for maximum performance in structural steel materials and applications. These solutions utilise the T-A, GEN2 T-A, GEN3SYS XT Pro, GEN3SYS XT, and 4TEX Drill designs and capabilities.

With multiple geometries and coatings, you're sure to find the solution that is right for you. Tough drilling is tough no more.

Excellent chip control	Improves hole quality and surface finish	Provides maximum durability and stability

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

Structural Steel Drilling

Achieving Optimal Results in Structural Steel

Drilling in structural steel materials can be a difficult process, and achieving optimal results becomes a major issue. Allied Machine's structural steel drilling solutions have been specifically designed to produce the best results in the toughest materials. With solutions in both the T-A® and GEN3SYS® XT Pro product lines, you have multiple options to solve your application problems.

Case Study Example

CASE STUDY

Project Profile: Structural Steel H-Beam Construction
Tooling Solution: T-A® Structural Steel Drilling System

The Problem:

Previously, the customer was using a competitor spade drill running at the following parameters:

- 650 RPM
- 0.25 mm/rev (0.010 IPR)
- 165.1 mm/min (6.5 IPM)

The tool drilled a 22.23 mm (0.875") diameter hole to a 11.11 mm (0.4375") depth. The drill had a tool life of **only 20 holes**.

The poor tool performance was brought to the attention of the technician, who was familiar with Allied Machine products. The following day, Allied Machine tooling was brought in for testing. The customer needed improvement in the tool life of the inserts.

The Solution:

Allied Machine recommended the T-A structural steel drilling system.

- **Insert** = 151A-0028-TW (#1 series T-A insert with TiAlN coating and thin wall geometry)
- **Holder** = 25010H-004IS052 (#1 series T-A holder with #4 Morse Taper shank and helical flute)

The tool ran at the following parameters:

- 440 RPM
- 0.25 mm/rev (0.010 IPR)
- 111.7 mm/min (4.4 IPM)

The tool achieved the desired diameter and depth. But most of all, the tool produced **1,500 holes**.

Summary:

The customer was able to take advantage of Allied Machine's vast experience in the structural steel drilling niche. Allied's wide variety of stocked solutions for specific customer problems allows for a remarkable increase in tool life.

The T-A structural steel drilling system defeated the competition, resulting in a **cost per hole savings of 89%** for the customer.

The **PROOF** is in the
NUMBERS

Competitor Insert Tool Life
(number of holes = 20)

T-A Structural Steel Insert Tool Life
(number of holes = 1,500)

Overall **SAVINGS** of
89%

PREMIUM SOLUTION

T-A® and GEN2 T-A® Structural Steel Drilling System

STRUCTURAL STEEL ENHANCEMENTS T-A® & GEN2 T-A®

GEN2 T-A Insert

Available in AM300® and AM200® Coatings

High Efficiency (-HE)

- Improves performance.
- Improves tool life.
- Improves chip formation in structural steel materials.

T-A Inserts

Available in AM200® and TiAlN Coatings

Thin Wall (-TW)

- Designed for drilling 6 mm (7/16") thick or less H-beam or structural materials.
- Increases hole diameter tolerance.
- Improves hole roundness.
- Decreases material deflection.

Notch Point® (-NP)

- Provides excellent self-centering characteristics.
- Reduces bell mouth and tool lead-off.
- Reduces axial thrust requirements.

Structural Steel (-SS)

- Designed for drilling 6 mm (7/16") thick or thicker H-beam or structural materials.
- Reduces exit burrs.
- Increases stability.
- Lowers drilling forces.
- Includes Notch Point® web geometry.

T-A® Structural Steel Drill Inserts

2 Series | Diameter Range: 24.41 mm - 35.06 mm (0.9610" - 1.3809")

A

DRILLING

Thin Wall
For material up to 6 mm (7/16") thick.

B

BORING

Notch Point®
For material over 6 mm (7/16") thick.

C

REAMING

150° Structural Steel
For material over 6 mm (7/16") thick
and for reduced exit burr.

D

BURNISHING

A91: 14 - 15

m = Metric (mm)

i = Imperial (in)

Screws sold in multiples of 10.

WARNING Refer to Speed and Feed charts for recommended adjustments to speeds and feeds. Refer to page A91: 21 for deep hole drilling guidelines in this section of the catalogue. Visit www.alliedmachine.com/DeepHoleGuidelines for the most up-to-date information and procedures. Factory technical assistance is available for your specific applications through our Application Engineering Team. email: engineering.eu@alliedmachine.com

T-A® Structural Steel Drill Inserts

3 Series | Diameter Range: 34.37 mm - 47.82 mm (1.3530" - 1.8829")

A

DRILLING

Thin Wall
For material up to 6 mm (7/16") thick.

B

BORING

Notch Point®
For material over 6 mm (7/16") thick.

C

REAMING

150° Structural Steel
For material over 6 mm (7/16") thick
and for reduced exit burr.

D

BURNISHING

HSS Inserts – Super Cobalt

Deep Hole Drilling Guidelines

For Use with Drills Greater than 9xD (Extended, Long, XL, 3XL, and Special Length)

1. Pilot Hole 100 % RPM 100% mm/rev (IPR)	Establish the pilot hole using the same diameter short drill to a depth of 2xD minimum. Utilise a pilot drill with the same or larger included point angle.		Coolant ON 
2. Feed-in 50 RPM max 300 mm/min (12 IPM)	Feed the longer drill within 1.5 mm (1/16") short of the established pilot hole bottom at a maximum of 50 RPM and 300 mm/min (12 IPM) feed rate.		Coolant OFF 
3. Deep Hole Transition Drilling 50 % RPM 75% mm/rev (IPR)	Drill additional 1xD past the bottom of the pilot hole at 50% reduction of recommended speed and 25% reduction of recommended feed. Minimum of 1 second dwell is required to meet full speed before feeding.		Coolant ON 
4. Deep Hole Drilling - Blind 100% RPM 100% mm/rev (IPR)	Drill to full depth at recommended speed and feed for longer drill according to Allied speed and feed charts. No peck cycle recommended.		Coolant ON 
5. Deep Hole Drilling - at Breakout 50% RPM 75% mm/rev (IPR)	For through holes only: Reduce speed by 50% and feed by 25% prior to breakout. Do not breakout more than 3 mm (1/8") past the full diameter of the drill.		Coolant ON 
2. Drill Retract 50 RPM max	Reduce speed to a maximum of 50 RPM before retracting from the hole.		Coolant OFF 

A91: 64 - 65

WARNING Tool failure can cause serious injury. To prevent:

- When using holders without support bushing, use a short T-A® holder to establish an initial hole that is a minimum of 2 diameters deep.
- Do not rotate tool holders more than 50 RPM unless it is engaged with the workpiece or fixture.

GEN3SYS® XT Pro Structural Steel Drilling System

A

DRILLING

GEN3SYS® XT Pro **ST**

STRUCTURAL STEEL ENHANCEMENTS

B

BORING

New Point Design

Increases stability without hindering penetration

Redesigned Insert

Provides consistent performance and adds durability

Improved Geometry

Extends tool life and increases insert strength without increasing horsepower consumption

AM420

AM420 Coating

Increases heat threshold and extends tool life

C

REAMING

Get the Consistency You Need

The challenge of drilling structural steel materials is about to get easier. Developed through a rigorous and thorough testing process, the modified and improved XTST insert is a product of innovation.

Achieve the **consistent performance** you need while matching or even exceeding your current parameters.

D

BURNISHING

Tough Drilling is Tough No More

Structural steel applications can prove to be difficult to machine, so you need a drill that's been put through the fire to ensure it can conquer those challenging applications.

Rigorous testing and countless hours of design and programming make the XT Pro structural steel insert the optimal drill for structural steel applications.

- Diameter range: 12.00 mm - 35.00 mm (0.4724" - 1.3780").
- Holders available in 1.5xD, 3xD, 5xD, and 7xD lengths.
- Flanged shank with flat.

4TEX® Drill Safety Information

Mechanical / Physical Hazards

Operating cutting tools may present both mechanical and physical hazards. These hazards can result in serious injury to workers or those near machines and damage to machines and the cutting tools. Cutting tools and/or assemblies may break or come loose when in operation causing projectile metal fragments. Metal chips produced by cutting tools have sharp edges and may be very hot. To minimise the risk of mechanical or physical hazards:

- Always secure all components of the cutting tool assembly before operating.
- Wear cut-resistant gloves when handling cutting tool components and assemblies.
- Do not touch metal chips produced by the cutting tools with your hands.
- Always wear appropriate personal protective equipment including safety goggles or glasses with side shields.
- Immediately discontinue use of damaged cutting tools.
- To avoid machine tool damage, make sure the machine has adequate power and torque for the cutting tool when operating. See catalogue for power and torque requirements.
- Operating long cutting tools at high spindle speeds can result in a high risk of tool failure and serious injury.

Dust and Fume Hazards

Grinding, welding, cutting or burning hard metals such as high-speed steel, cobalt or carbides produces hazardous dust and/or fumes. Continued long-term exposure to hazardous dust and fumes can cause serious health issues. To minimise the risk of dust and fume hazards:

- Do not regrind or sharpen cutting tools without using adequate ventilation.
- Use appropriate personal protective equipment such as approved respirator to avoid inhalation, swallowing, or skin contact with the hazardous dust and/or fumes.
- Do not eat, drink, or smoke in the machine operation area. Always wash skin prior to eating, drinking, or smoking to avoid hazardous ingestion.

Sensitising Hazards

Components of an assembled cutting tool are made from a variety of metal elements that may cause allergic skin reactions with prolonged skin contact. To minimise the risk of allergic skin reactions:

- Avoid skin contact with cutting tools.
- Wear appropriate gloves and protective clothing.
- Wash skin and launder clothing after handling cutting tools to reduce the risk of skin allergies.

Preventive Safety Measure Applicable to all Hazards

- Prior to using cutting tools, always read Allied Machine's Safety Data Sheets, product catalogue, and product labels for additional warnings for the Allied Machine product being used.
- For machining safety, only operate equipment when all necessary guards, interlocks and other safety devices are in place and functional. Use all appropriate safety guards or machine encapsulations to securely collect particles such as chips or cutting elements that may become projectiles.

Through Hole

- With through holes, a **sharp-edged disk** is created as tool breakout occurs.
 Proper personal protective equipment must be used to prevent injury (e.g. wear cut-resistant gloves).

4TEX® Drilling System

4TEX Drill **Advantages**

- ✓ **Superior chip evacuation**
provided by the two twisted coolant holes
- ✓ **Improved hole size**
from the increased holder rigidity
- ✓ **Longer tool life**
provided by the four-sided insert design
- ✓ **Optimal chip formation**
with ISO-specific insert geometry/coating combinations
- ✓ **Competitive cycle times**
due to single effective cutting when using light duty machines

DESIGNED TO GIVE YOU **IMPROVED** HOLE SIZE AND STRAIGHTNESS

- The two twisted coolant holes allow the core to remain intact, making the core thicker and stronger for improved hole straightness even in uneven surfaces.
- The enlarged dual coolant outlets increase the coolant volume, which improves the chip evacuation resulting in improved hole size.
- The flute space of the internal cutting edge side (where chips get stuck most often) is 1.6x larger than typical IC drills, helping to mitigate catastrophic failures and improves hole sizes.

LONGER TOOL LIFE

AVAILABLE **LENGTHS**

Insert Information

4 CUTTING EDGES

- Each insert has two inner cutting edges and two outer cutting edges.
- Economical solution that increases tool life because of the ability to rotate the inserts.
- Available in ISO material-specific geometry/coating combinations.

Periphery Insert

Periphery edge chip formation:

Center Insert

Center edge chip formation:

180°

ISO Material	Geometry	Coating	Description
P	General Rake	AM480	A general purpose geometry that provides excellent chip formation in most steels including free-machining, medium- and high-carbon steels. A P30 carbide substrate for improved toughness and AM480 coating, a proprietary wear resistant multilayer PVD coating to improve tool life.
S M	High Rake	AM485	A higher rake geometry that provides excellent chip formation in both stainless steels and high-temperature alloys. A tough M25 carbide substrate coated with AM485, a high heat resistance proprietary multilayer PVD coating.
H	Low Rake	AM480	A lower rake geometry to improve edge strength in both hardened tool steels and high-strength alloys. With a P30 carbide substrate for improved toughness and coated with AM480, a proprietary multilayer PVD coating to improve resistance against tool wear.
K	General Rake	AM480	With a general purpose geometry, the K inserts can be used in grey cast irons as well as ductile irons. A high wear-resistant K10 carbide substrate to improve tool life and coated with AM480, a proprietary multilayer PVD coating to improve resistance against tool wear.
N	High Rake	TiCN	A higher rake cutting geometry provides excellent chip formation in nonferrous materials. An M15/K15 carbide substrate paired with TiCN coating for improved lubricity to resist built-up material, increasing tool life and maintaining chip formation.

4TEX® Drill Interrupted Cuts

(DON'T) PARDON THE INTERRUPTION

The 4TEX drill is the premium solution when the cut is interrupted. The indexable carbide insert design provides multiple points of stability, so the entire cutting edge does not require engagement while still providing the hole quality required.

QUICK TROUBLESHOOTING

Starting on Angled Surfaces

- Reduce entry feed by 20 - 50%
- Use lower rake geometry if insert chipping occurs

Angled Bore Exit

- Reduce entry feed by 50% on breakout
- Use tough insert and stable corner radius

Starting on Convex Surfaces

- Reduce entry feed by 50%
- Use lower rake geometry if insert chipping occurs

Drilling Through a Cross Hole

- Reduce feed rate by 50% if necessary
- Use good coolant flow and monitor chip packing
- Use lower rake geometry if insert chipping occurs

Chain Drilling

- Use good coolant flow
- Reduce feed rate by 50% for interrupted cut
- Use lower rake geometry if insert chipping occurs

THE PROOF IS IN THE CHIPS

*Diameter adjustment range refers to the cutting diameter.

Milling Applications
Peripheral Adjustment Position

Lathe Applications
Front Adjustment Position

Diameter Adjustment

Milling and Lathe Applications

For Milling Applications

1. Assemble the 4TEX drill, eccentric sleeve, and tool holder. Do not tighten the tool holder set screws.
2. Using the peripheral marks for milling machines, align the reference indentation on the holder with the 0 (zero) mark on the eccentric sleeve to have no offset.
3. Rotate the sleeve in the (+) or (-) direction to increase or decrease the nominal diameter.
4. Once the drill has arrived at the desired diameter, firmly tighten the top set screw first and then tighten the bottom set screw.

NOTICE: Eccentric sleeves are to be used with side-locking tool holders only. Damage may result with other styles of tool holders.

For Lathe Applications

1. Assemble the 4TEX drill into the lathe turret with the top face of the inserts parallel to the x-axis of the machine. This will allow for the diameter offsets to be made using the lathe's x-axis.
2. To increase the nominal diameter, offset the x-axis so the periphery insert moves away from the center of the hole.
3. To decrease the nominal diameter, offset the x-axis so the periphery insert moves toward the center of the hole.

NOTE: Eccentric sleeve is not required when adjusting the diameter of the hole on a lathe.

Center Height Alignment

Proper Center Line Position

Proper Center Height Alignment

- The correct center height alignment will position the center insert 0.2 mm (0.007") below the center line.

Center Insert Above the Center Line

- This will cause fracturing of the center insert.
- Requires center height adjustment.

Center Insert Too Far Below Center Line

- This will cause the drill to interfere with the drilled hole.
- This will impede chip evacuation on the periphery insert.
- Requires center height adjustment.

Center Height Alignment

How to Correct Issues

Method 1: Adjustment with X-Axis

1. Rotate the drill body so the position of the center line of the inserts is perpendicular to the lathe's x-axis.
2. Use the x-axis to offset the position of the center line in a (+) or (-) direction to increase or decrease the center core diameter at the bottom of the hole.

NOTE: This method does not allow diameter adjustments using the x-axis.

Method 2: Adjustment with Eccentric Sleeve

1. Assemble the drill to the turret using the eccentric sleeve, positioning the center line of the inserts parallel to the x-axis.
2. Align the reference indentation on the drill to the "0" setting on the flange face.
3. Rotate the sleeve (+) or (-) to increase or decrease the center height of the inserts in order to increase or decrease the core diameter at the bottom of the hole.

NOTE: This method still allows diameter adjustments using the x-axis.

NOTE (applies to both methods): Adjusting the center line of the inserts may affect the hole diameter produced. Method two is preferred to make center height adjustments and compensate for hole diameter with the x-axis.

NOTE: The speeds and feeds listed above are based on a rigid setup using air mist through tool coolant. Speed may be increased up to 50% if using high pressure flood or through coolant.

NOTE: If drilling dry without coolant, speed must be reduced significantly based on setup, drill depth, and material hardness. Up to 50% speed and feed reduction may be necessary in these types of applications. Contact the Application Engineering department for assistance. email: engineering.eu@alliedmachine.com

NOTE: If drilling material thickness of 12.7 mm (0.500") or less, a minimum of 10% reduction in feed is required to minimise material deflection.

Recommended Drilling Data | Metric (mm) | Imperial (inch)

4TEX® Indexable Drill

Metric (mm)

ISO	Material	Hardness (BHN)	Speed (M/min)	Feed Rate (mm/rev) by Diameter - 2xD, 3xD*			
			P	03, 04 Series (12.00 mm - 15.00 mm)	05 Series (15.88 mm - 18.00 mm)	06, 07 Series (19.00 mm - 26.00 mm)	09, 11, 14 Series (27.00 mm - 39.67 mm)
			AM480				
P	Structural Steel	100 - 150	100 - 185	0.05 - 0.13	0.07 - 0.13	0.08 - 0.13	0.08 - 0.13
	A36, A285,	150 - 250	100 - 185	0.05 - 0.13	0.07 - 0.13	0.08 - 0.13	0.08 - 0.13
	A516, etc.	250 - 350	100 - 185	0.05 - 0.13	0.07 - 0.13	0.08 - 0.13	0.08 - 0.13

*For 4xD tools, begin at low end of feed recommendation.

Imperial (inch)

ISO	Material	Hardness (BHN)	Speed (SFM)	Feed Rate (IPR) by Diameter - 2xD, 3xD*			
			P	03, 04 Series (0.472" - 0.591")	05 Series (0.625" - 0.709")	06, 07 Series (0.748" - 1.024")	09, 11, 14 Series (1.063" - 1.562")
			AM480				
P	Structural Steel	100 - 150	330 - 600	0.0015 - 0.0055	0.0025 - 0.0065	0.003 - 0.008	0.003 - 0.008
	A36, A285,	150 - 250	330 - 600	0.0015 - 0.0055	0.0025 - 0.0065	0.003 - 0.008	0.003 - 0.008
	A516, etc.	250 - 350	330 - 600	0.0015 - 0.0055	0.0025 - 0.0065	0.003 - 0.008	0.003 - 0.008

Insert Geometry Recommendations | Troubleshooting

4TEX® Indexable Drill

Insert Geometry Recommendations

ISO	Material	Hardness (BHN)	Geometry				
			P	M	K	N	H
P	Structural Steel A36, A285, A516, etc.	100 - 150	○	●			
		150 - 250	○	●			
		250 - 350	●				○

Troubleshooting

- 

Starting on Uneven Surfaces

 - Reduce entry feed by 50% if necessary
- 

Starting on Angled Surfaces

 - Reduce entry feed by 20 - 50%
 - Use lower rake geometry if insert chipping occurs
- 

Angled Bore Exit

 - Reduce entry feed by 50% on breakout
 - Use tough insert and stable corner radius
- 

Starting on Convex Surfaces

 - Reduce entry feed by 50%
 - Use lower rake geometry if insert chipping occurs
- 

Drilling Through a Cross Hole

 - Reduce feed rate 50% if necessary
 - Use good coolant flow and monitor chip packing
 - Use lower rake geometry if insert chipping occurs
- 

Drilling on a Groove or Large Centering Box

 - Reduce entry feed
 - Use lower rake geometry for center insert

- 

Chain Drilling

 - Use good coolant flow
 - Reduce feed rate by 50% for interrupted cut
 - Use lower rake geometry if insert chipping occurs
- 

Starting on an Edge

 - Reduce entry feed rate by 50%
 - Use lower rake geometry if insert chipping occurs
- 

Starting on a Welded Seam

 - Reduce entry feed rate by 50%
 - Use lower rake geometry if insert chipping occurs
- 

Drilling Through Stacked Plates

 - Not recommended
- 

Opening an Existing Hole

 - Use flood coolant
- 

Adjustable

 - For mills, use eccentric sleeve with end mill holder
 - For lathes, use x-axis to adjust offset ϕ

NOTE: Refer to maximum offset ϕ in data tables

Interactive Experience

Visit our digital platform.

- Explore various locations and zones to see real people in real positions.
- See our training and engineering departments.
- Get a glimpse of our state-of-the-art logistical and machining equipment.
- Virtually meet our customer service and marketing teams.
- Access digital resources like literature, videos, online tools and training.

experience.alliedmachine.com

ToolMD®

Increase the production and success of your applications today.

- Direct access to 2D drawings and 3D models.
- Assemble and view tool images in your browser.
- Download drawings for use in most machining software programs.
- Browse products, search item numbers, and save assemblies for future use.

toolmd.com

WOHLHAUPTER®

Boring Insert Selector

Find the best insert for your application.

- Generate the correct boring insert for your job in just six easy steps.
- Choose type, shape, substrate, insert form, nose radius, and material.
- Order easily by adding the item to your cart.

alliedmachine.com/bis

Insta-Code®

Eliminate the wait. Get your program now.

- Choose the best thread mill for your application.
- Create program codes for your machine.
- Available as a PC download app (that can be used offline).
- Website app available 24/7.

Insta-Code also has a
Cycle Time Calculator.

alliedmachine.com/InstaCode

Insta-Quote®

Design your custom tooling and receive a drawing and quote...all within minutes.

- Design and quote your own tooling.
- Generate the solution you need in just a few steps.
- Features the following products:
 - T-A® Inserts
 - T-A® Holders
 - GEN3SYS® XT Holders
 - ALVAN® Reamers

Support You Can Count On

Allied Machine has many lines of support to ensure we're available to assist you at all times. It's important to establish relationships with new customers, but we also know it's equally important to strengthen and support relationships with existing customers. Whether you need help with an order or you need someone to assist you at the spindle, we have the right people to get you what you need.

1

Internal Sales Support

Our inside sales team is trained to handle your account information and general inquiries. We are happy to assist you and find the answers to your questions.

☎ +44 (0)1384 400900 opt. 3

✉ sales.eu@alliedmachine.com

2

Engineering Support

Our highly trained and skilled Application Engineers are here to assist you. If you are experiencing technical difficulties, our engineers will recommend the best solutions to the problem. Speeds and feeds, coolant pressure, and other machining components all affect the performance of our tooling. Our Application Engineers (AEs) are experienced in working with difficult materials in many different environments. Give us a call and put our knowledge to the test.

☎ +44 (0)1384 400900 opt. 4

✉ engineering.eu@alliedmachine.com

3

Field Support

Allied Machine provides local engineering support all over the world. Our Field Sales Engineers (FSEs) spend months training in-house before going to the field. This support line allows us to provide assistance to our customers right at the spindle. They are available to visit your facility, run demos and tests, and work hand-in-hand with machine operators and engineers to find the best possible tooling solutions.

Visit www.alliedmachine.com/field-lookup to find your Regional Sales Manager.

Online Training

Get **all** the tooling training of our 2-day in-person Technical Education Seminar (TES) through the online **Allied Tool Academy** training platform. Level up your tooling IQ through a series of product overviews, demos, and short quizzes.

- Online TES Certification as well as other training modules.
- On demand.
- On YOUR schedule .

Register online today:
www.alliedtoolacademy.com

On-site Technical Education Seminar (TES)

Allied Machine's **Technical Education Seminar (TES)** puts the attendees in front of the machines. When you attend our two day TES program, you'll gain first-hand experience in **real-life** application situations. Test and experiment with different speeds and feeds, observe the results, and discover the best solution.

- Training Lab: In-depth training at the spindle allows you to choose speeds and feeds.
- Learning Lab: Quick, brief sessions provide basic knowledge of our products.
- Facility Tours: Take guided tours of our two facilities located in Kingswinford, UK and Frickenhausen, D.

Register online today:
www.alliedmachine.com/TES

ALLIED MACHINE & ENGINEERING

Warranty Information

Allied Machine & Engineering ("Allied Machine") warrants to original equipment manufacturers, distributors, industrial and commercial users of its products for one year from the original date of sale that each new product manufactured or supplied by Allied Machine shall be free from defects in material and workmanship.

Allied Machine's sole and exclusive obligation under this warranty is limited to, at its option, without additional charge, replacing or repairing this product or issuing a credit. For this warranty to be applied, the product must be returned freight prepaid to the plant designated by an Allied Machine representative and which, upon inspection, is determined by Allied Machine to be defective in material and workmanship.

Complete information as to operating conditions, machine, setup, and the application of cutting fluid should accompany any product returned for inspection. This warranty shall not apply to any Allied Machine products which have been subjected to misuse, abuse, improper operating conditions, improper machine setup or improper application of cutting fluid or which have been repaired or altered if such repair or alteration, in the judgement of Allied Machine, would adversely affect the performance of the product.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Allied Machine shall have no liability or responsibility for any claim, whether in contract, tort or otherwise, for any loss or damage arising out of, connected with, or resulting from the manufacture, sale, delivery or use of any product sold hereunder, in excess of the cost of replacement or repair as provided herein.

Allied Machine shall not be liable in contract or in tort (including, without limitation, negligence, strict liability or otherwise) for economic losses of any kind or for any special, incidental, indirect, consequential, punitive or exemplary damages arising in any way out of the performance of, or failure to perform this agreement.

ALL PRICES, DELIVERIES, DESIGNS, AND MATERIALS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
